Adding Fractions

$$1) \quad \frac{7}{10} + \frac{2}{3} = \frac{21}{30} + \frac{20}{30} = \frac{41}{30} = 1 \frac{11}{30}$$

$$2) \quad \frac{1}{3} + \frac{2}{4} = \frac{4}{12} + \frac{6}{12} = \frac{10}{12} = \frac{5}{6}$$

$$3) \quad \frac{6}{10} + \frac{2}{3} = \frac{18}{30} + \frac{20}{30} = \frac{38}{30} = \frac{19}{15} = 1 \frac{4}{15}$$

$$4) \quad \frac{3}{10} + \frac{1}{3} = \frac{9}{30} + \frac{10}{30} = \frac{19}{30}$$

$$5) \quad \frac{6}{10} + \frac{1}{5} = \frac{6}{10} + \frac{2}{10} = \frac{8}{10} = \frac{4}{5}$$

$$6) \quad \frac{1}{5} + \frac{1}{4} = \frac{4}{20} + \frac{5}{20} = \frac{9}{20}$$

$$7) \quad \frac{3}{5} + \frac{2}{3} = \frac{9}{15} + \frac{10}{15} = \frac{19}{15} = 1 \frac{4}{15}$$

$$8) \quad \frac{1}{4} + \frac{1}{2} = \frac{1}{4} + \frac{2}{4} = \frac{3}{4}$$

$$9) \quad \frac{2}{5} + \frac{2}{4} = \frac{8}{20} + \frac{10}{20} = \frac{18}{20} = \frac{9}{10}$$

$$10) \quad \frac{1}{2} + \frac{2}{4} = \frac{2}{4} + \frac{2}{4} = \frac{4}{4} = 1$$
